Although Colorado's local health departments' local match expenditures are continuing to move from direct and enabling services to infrastructure services, actual direct services were higher than originally projected.

Prior to Federal Fiscal Year 2007, the trend year to year was a steady decrease of Direct Health Care Services into other service areas. Analysis has now shown that Direct Health Care Services have leveled off. Budgeting for 2009 has been adjusted based on this trend.

d. CSHCN	11,559
e. Others	27,610

11. Statewide Initiatives and Partnerships:

a. Direct Medical Care and Enabling Services:

(max 2500 characters)

Limited Title V funding is used for direct services. Funding provided to School Based Health Center activities has been primarily targeted at planning and developing new centers; however, some funding is used to provide direct care within these sites. Case management services funded by the Health Care Program for Children with Special Health Care Needs funds are predominantly enabling services.

b. Population-Based Services:

(max 2500 characters)

Examples of population-based services include activities targeting women and prenatal care providers regarding adequate weight during pregnancy and activities directed toward teen motor vehicle safety. Pregnant women and their health care providers are also the target of smoking cessation efforts. Screening and follow-up efforts for metabolic/genetic and hearing are provided for all newborn infants born within the state. The state program for children and youth with special health care needs assists families to negotiate the health care system and provides education to the public about certain diagnosis and disorders. Projects targeting children and school- aged youth address community efforts to increase safety, reduce the use of tobacco and other substances, improve the safety of child care facilities, and develop systems to enhance mental health.

c. Infrastructure Building Services:

(max 2500 characters)

Title V supports the development of county MCH data profiles and analysis. The program uses funds to build capacity to collect, analyze and report data relevant to MCH populations. There is a close working relationship between the Health Statistics Section and the MCH programs and collaboration with projects such as the Child Health Survey and PRAMS. A number of state and department-wide projects are underway related to data and evaluation. The state supports statewide Maternal Mortality and Child Fatality Review Committees. The CASH Unit works on many joint projects related to adolescent health, early childhood health, coordinated school health practices and violence prevention. HCP works to promote comprehensive systems of care and medical home approach to meet the needs of children and their families.

LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE: CO FY: 2009

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. Improve healthy birth outcomes for pregnant women
2. Improve access to health care for MCH populations
3. Improve immunization rates for all children
4. Reduce the adolescent fertility rate
5. Reduce rates of child and adolescent motor vehicle injury and death
6. Improve preconceptional health among women
7. Reduce the incidence of overweight among children and teens
8. Improve the mental health of MCH populations
9. Improve the health of children

PERFORMANCE MEASURE:

The proportion of children and adolescents attending public schools who have access to basic preventive and primary, physical and behavioral health services through school-based health centers

STATUS:

Active

GOAL

To increase the number of public school students who have access to health services through school-based health centers.

DEFINITION

Numerator:

Number of public school children with access to school-based health services, either on-site or school-linked.

Denominator:

Total number of public school children in state

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

Related to 1-3, 1-4, 16-22, 18-7, and 21-3.

DATA SOURCES AND DATA ISSUES

Data on schools with school-based health centers are collected through the Colorado School-Based Health Center Initiative, which is located at the Colorado Department of Public Health and Environment. Data on the number of children in public schools are collected and reported by the Colorado Department of Education and can be found on their website.

SIGNIFICANCE

School-based health is viewed as a very effective means to deliver health services to children and adolescents. School-based health centers provide community-based services to children and adolescents, and include a broad range of primary and preventive health services including access to mental health counseling.

SP # 2

PERFORMANCE MEASURE:

Percent of Medicaid-eligible children who receive dental services as part of their comprehensive services

STATUS:

Active

GOAL

To increase access to oral health services for Medicaid-eligible children.

DEFINITION

Numerator:

Number of children who have received dental care during the fiscal year through Medicaid.

Denominator:

Number of children eligible for Medicaid services during the fiscal year.

Units: 100 **Text:** Percent

Related to 21-2, 21-8, 21-10, and 21-12 concerning access and use of dental care.

DATA SOURCES AND DATA ISSUES

Data are collected through the HCFA reporting system using the most appropriate HCFA forms (1500, 416, 2082).

SIGNIFICANCE

The utilization of dental services by Medicaid eligible children reached a critical "low" point in the late 1990s, with fewer than 20 percent receiving services. This is a problem related to many factors: lack of Medicaid dental providers, inadequate reimbursement rates, client no-shows, and lack of knowledge among parents about the role of preventive care and how to access the benefit. Following the "Building Partnerships to Improve Children's Access to Medicaid Dental Health Services" meeting in June 1998, clear expectations for developing initiatives and coalitions between public and private sectors were set forth for states to begin to address the problem. Colorado began to see improvement in this measure in 2002.

SP # 3

PERFORMANCE MEASURE:

The percentage of women with inadequate weight gain during pregnancy

STATUS:

Active

GOAL

To reduce the number of low birth weight births in Colorado.

DEFINITION

Numerator:

Number of women whose weight gain during pregnancy was less than the recommended amount according to BMI (recommendations by the Institute of Medicine).

Denominator:

Units: 100 **Text:** Percent

Related to 16-12: Increase the proportion of mothers who achieve a rec.weight gain.

DATA SOURCES AND DATA ISSUES

Colorado Pregnancy Risk Assessment Survey (PRAMS). Data are available on an annual basis and reflect the population of all women giving birth.

SIGNIFICANCE

Colorado's low birth weight rate, one of the highest in the nation, could be reduced by nearly one full percentage point if all women gained weight adequately during pregnancy. In a study released in September 2000, the Colorado Department of Public Health and Environment reported that inadequate weight gain was the number one risk factor for low birth weight in the state, resulting in nearly 600 excess low birth weight infants each year. One in four pregnant women does not gain enough weight according to her height and weight. When women receive appropriate counseling around nutrition, weight gain is greatly improved.

Objective 9-7. Reduce pregnancies among females aged 15-17

DATA SOURCES AND DATA ISSUES

Colorado Department of Public Health and Environment, Health Statistics Section, birth records. Colorado Department of Local Affairs, Demography Section, population estimates. Data issue: the number of Hispanic females may not be easily estimated due to sharp changes in migration in Colorado related to economic conditions.

SIGNIFICANCE

In Colorado in 2004, 62 percent of all births to teens age 15-17 were Hispanic. The fertility rate of young Hispanic girls was 7 times the rate of White non-Hispanic girls and double the rate of Black girls. Young teens who give birth are less likely to complete their education or to obtain secure employment. Delaying fertility in this age group is recommended for this reason in addition to the fact that children of teens are often less likely to do well in school themselves.

15-15, 15-19, 15-22, and 7-2 related to motor vehicle deaths, seatbelt use, graduated licensing, and

DATA SOURCES AND DATA ISSUES

Colorado Department of Public Health and Environment, Health Statistics Section, death records. Colorado Department of Local Affairs, Demography Section, population estimates.

SIGNIFICANCE

Motor vehicle death is the largest cause of death among teens in Colorado. In 2002, 94 teens were killed in motor vehicle crashes, a rate of 29.8 deaths per 100,000 teens. A total of 27 states had lower (better) rates, ranking Colorado in the top half of states with the highest rates. There is a great deal of variation in motor vehicle fatality rates by state: New Hampshire had the lowest rate in 2002, with 5.5 deaths per 100,000 teens and Montana had the highest rate with 50.2 deaths. Highway speed limits, primary seatbelt laws, graduated driver licensing laws, and alcohol use all impact the level of this rate. The adoption of increasingly restrictive graduated driver licensing (GDL) laws in Colorado in recent years has begun to have an impact on the state's high rate. In 2005, the number of motor vehicle deaths to teens age 15-19 dropped to 65, and the resulting rate was 18.6.

SP # 6

STATUS:

Active

GOAL

DEFINITION

Numerator:

Number of mothers who smoke during the 3 months before pregnancy.

Denominator:

Units: 100 **Text:** Percent

16-10, 16-11, 16-17c, and 27-6 related to smoking during pregnancy.

DATA SOURCES AND DATA ISSUES

Colorado Department of Public Health and Environment, Health Statistics Section, Colorado Pregnancy Risk Assessment Monitoring System (PRAMS). Data are available on an annual basis and reflect the population of all women giving birth.

SIGNIFICANCE

Smoking during pregnancy is harmful to the fetus in a number of ways, and contributes significantly to low birth weight. In Colorado, 1 out of every 8 low birth weight births can be attributed to the fact that the mother was a smoker. In 1997, one quarter (25.8%) of all mothers giving birth were smokers prior to conception. While this figure fell to one-fifth (20.1%) in 2002, and as many as one-half of smokers quit during pregnancy, this still leaves 1 in 10 births exposed to smoking prior to birth. Quit smoking efforts can be very successful among pregnant women, but PRAMS data for Colorado show that about one-half of quitters resume smoking after their babies are born. By far the most effective course is to have women be or become non-smokers prior to conception. This limits exposure to smoking for the fetus throughout pregnancy and also reduces the chance of recidivism for the mother.

SP # 7

PERFORMANCE MEASURE:

The proportion of all children 2-14 whose BMI is at or above 85% of normal weight for height.

STATUS:

Active

GOAL

Reduce the proportion of all children 2-14 whose BMI > 85% of normal weight for height.

DEFINITION

19-3, 22-9, and 7-2 related to overweight/obesity in children.

19-3, 22-9, and 7-2 related to overweight/obesity in children.

DATA SOURCES AND DATA ISSUES

Colorado Department of Public Health and Environment, Health Statistics Section, Colorado Child Health Survey.

SIGNIFICANCE

Overweight acquired during childhood or adolescence may persist into adulthood and increase the risk for some chronic diseases, including heart disease, later in life. Overweight also impacts children by limiting participation in physical activities and contributing to diabetes at younger and younger ages. The National Center for Health Statistics, using data from the National Health and Nutrition Examination Survey, estimated that 11 percent of children in the nation were overweight in 1990 and 15 percent were overweight in 2000. Based on preliminary data from the Colorado Child Health Survey in 2004, 16 percent of the sample ages 2 to 14 would be considered overweight. Healthy People 2010 stresses that reduction in BMI among children and adolescents should emphasize both a properly balanced diet and physical activity.

SP # 8

PERFORMANCE MEASURE:

Percent of children who have difficulty with emotions, concentration, or behavior.

STATUS:

Active

GOAL

Reduce the percent of children who have difficulty with emotions, concentration, or behavior.

DEFINITION

18-1, 18-2, 18-7, and 7-4 related to child mental health.

DATA SOURCES AND DATA ISSUES

Colorado Department of Public Health and Environment, Health Statistics Section, Colorado Child Health Survey.

SIGNIFICANCE

Healthy social emotional development is strongly linked to success in elementary school. Social and emotional development is just as important as literacy, language, and number skills in helping young children be ready for school. A child who is not secure in relating to others, doesn't trust adults, is not motivated to learn, or who cannot calm himself or be calmed enough to tune into teaching will not benefit from educational experiences. The emotional, social, and behavioral competence of young children is a strong predictor of academic performance in elementary school, and academic performance in elementary school is associated with academic performance in the higher grades.

DATA SOURCES AND DATA ISSUES

Qualistar Early Learning

SIGNIFICANCE

A critical component of improving health and safety in child care is the use of child care health consultants (APHA & AAP; USDHHS, 1996, 1997). The results of a 2002 evaluation of Colorado child care health consultants revealed that there are seven main impacts that nurse consultants have on health and safety in child care centers: (1) fewer child sick days; (2) fewer staff sick days; (3) better adherence to universal precautions; (4) higher immunization rates; (5) improved immunization record keeping; (6) more children screened and referred for additional services; and (7) more staff and parents knowing when to keep a sick child home.

26-9a, 26-10, 26-11, 26-16, 26-17, 7-2 related to adolescent alcohol use and school health education

DATA SOURCES AND DATA ISSUES

Colorado Youth Risk Behavior Survey, Colorado Department of Public Health and Environment.

SIGNIFICANCE

Teen use of alcohol is both illegal and harmful in high doses. Colorado teens have higher rates of alcohol use when compared to national data, and the state's 2003 Youth Risk Behavior Survey showed that 48 percent of high school students had one or more alcoholic drinks in the past 30 days. The percentage of students who report binge drinking, that is having 5 or more drinks in a row in a couple of hours, was 29 percent in the 2003 Colorado YRBS, ranking Colorado in the top one-third of states. Alcohol use among youth is associated with a wide variety of risky behaviors and poor outcomes, including unprotected sexual intercourse, vulnerability to coerced sexual activity, the use of marijuana, motor vehicle crashes and death, and poor academic performance. Alcohol use among adolescents results in an increased risk of alcohol dependence in adulthood. Binge drinking can contribute to many health disorders including cancer, liver, pancreatic and cardiovascular diseases, as well as a variety of gastrointestinal problems, neurological disorders and reproductive system disorders.

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Colorado Department of Public Health & Environment, Health Statistics Section birth records.

SIGNIFICANCE

Colorado's low birth weight rate is among the nation's highest. The rate has been increasing in recent years, and reached 9.1 percent in 2003. Infants born weighing less than 2,500 grams have greatly increased morbidity and mortality not only in the first year of life, but in subsequent years. Costs associated with low birth weight are substantial. Colorado has had success in its public health programs devoted to reducing behavioral risk (e.g., women quitting smoking and gaining weight adequately) during pregnancy. Birth weights have improved significantly among women served by the program known as Prenatal Plus, which is funded through Medicaid. The program has the potential to serve 10 to 15 percent of all births in the state, and to serve a far higher proportion of high-risk women most in need of risk reduction.

Field Level Notes**1. Section Number:** Health Systems Capacity Indicator #07A**Field Name:** HSC07A**Row Name:****Column Name:****Year:** 2007**Field Note:**

Date reported in previous years were based on an estimate. Current data reported reflects actual data for calendar year 2006. The numerator is the number of children enrolled in Medicaid vs. the number of potentially Medicaid-eligible children.

2. Section Number: Health Systems Capacity Indicator #07A**Field Name:** HSC07A**Row Name:****Column Name:****Year:** 2006**Field Note:**

The number of potentially Medicaid-eligible children who have received a service paid for by the Medicaid program is estimated to be 76.0 percent of all enrolled/eligible children. The estimate is based on a review of all Medicaid utilization data for calendar 2006 for children age 1 through 19. The method for estimating the percentage receiving at least one service is substantially improved from methods used for reporting years 2005 and earlier.

3. Section Number: Health Systems Capacity Indicator #07A**Field Name:** HSC07A**Row Name:****Column Name:****Year:** 2005**Field Note:**

The number of potentially Medicaid-eligible children who have received a service paid for by the Medicaid program is estimated to be 95.1 percent of all enrolled/eligible children.

For reporting year 2005, the denominator is composed only of children age 1-20 who are enrolled in Medicaid. In previous reporting years, the number included an additional estimate of children eligible for Medicaid who were not enrolled.

HEALTH SYSTEMS CAPACITY MEASURE # 07B

Progress is being made to eventually link birth certificate and WIC files.
2. **Section Number:** Indicator 09B
Field Name: YRBSS_09B
Row Name: Youth Risk Behavior Survey (YRBS)
Column Name:
Year: 2009
Field Note:
The Colorado YRBS has had an adequate sample size to determine statewide estimates in 1995 and 2005. Surveys in 1997, 1999, 2001, and 2003 did not have enough participation to yield statewide estimates. While results are not yet available for the 2007 survey, the number of participants will not be adequate for generalization.
3. **Section Number:** Indicator 09B
Field Name: Other1_09B
Row Name: Other
Column Name:
Year: 2009
Field Note:
The Colorado Child Health Survey uses Behavioral Risk Factor Surveillance System surveys to determine households with children between the ages of 1 and 14. The parent with the most knowledge about a randomly selected child is then subsequently interviewed. The Survey has been done annually since 2004. An adequate number of surveys each year yields generalizable estimates for a variety of child health indicators.
4. **Section Number:** Indicator 09A
Field Name: BAM
Row Name: Annual linkage of birth certificates and Medicaid Eligibility or Paid Claims Files
Column Name:
Year: 2009
Field Note:
There has been improvement in the ability of the state health department to obtain Medicaid data from the Colorado Department of Health Care Policy and Financing, although there is not yet linkage of birth certificates and Medicaid eligibility or paid claims files.
